

# Making Bridges

The children worked in small groups to make bridges.

They had to design the bridges using only materials found in the classroom.

Designing Bridges is a unit in Technology, however many other curriculum areas are integrated into this unit, such as Science, Mathematics, English, The Arts and Literacy.

Foam blocks were used by this group to create this interesting design.

Working in groups encourages children to work together and make compromises.

If children are allowed to create their designs in collaboration with their peers, they became very creative.

Children also learn to listen to the opinions of others and be respectful towards their peers.

Feeling very proud.

Peer teaching encourages year one students to guide and assist the Reception students .

They learn to explain things carefully and show a great deal of patience.

We have so much fun when we have Technology and Steam lessons.
